TAP INTO THE POWER OF
NETWORK AUTOMATION

> *Most companies today continue to manage their networks manually, as they don't have the resources to automate IT processes.*

Recent events have proven the important role IT teams play in ensuring business continuity, even in the most unlikely situations.
When the unpredictable happens, having an agile team in place can make the difference.

This is why today more than ever, IT leaders are expected to transform the way their teams operate, so that IT processes can be accelerated and easily scaled through the entire organization.
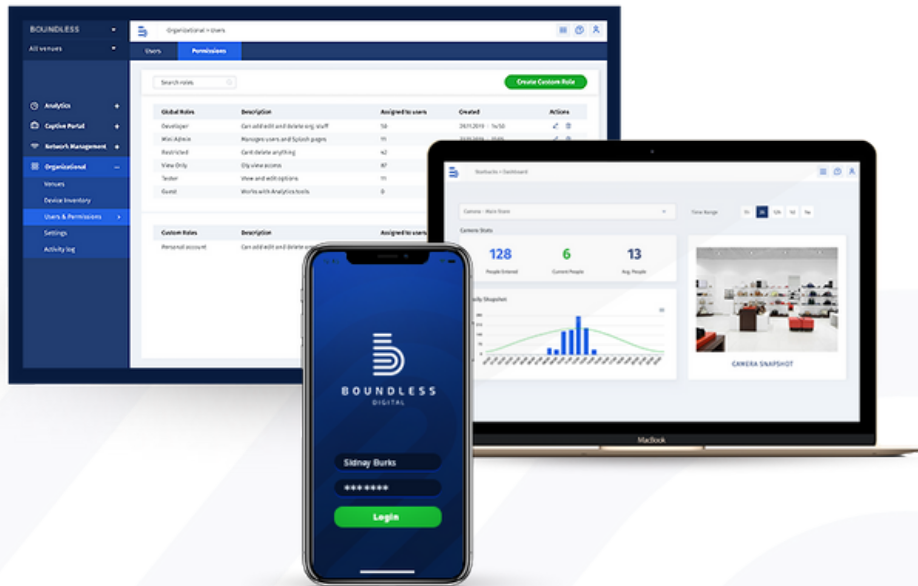

In this context, Network Automation becomes essential for organizations to keep pace in a changing world.

Network Automation is the process of using software to automate the configuring, managing, testing, and deploying of networks devices and their services.

Over the last years, an increasing number of businesses and service providers have used automation to improve efficiency, and reduce human error and operating expenses. However, in most cases, automating a network infrastructure takes time, money, and having the right skills. That's why most companies today continue to manage their networks manually, as they don't have the resources to automate IT processes.

It is for them that we have created the first No-Code Automation platform, powered by the Meraki Dashboard API.

INCREASE IT EFFICIENCY WITH
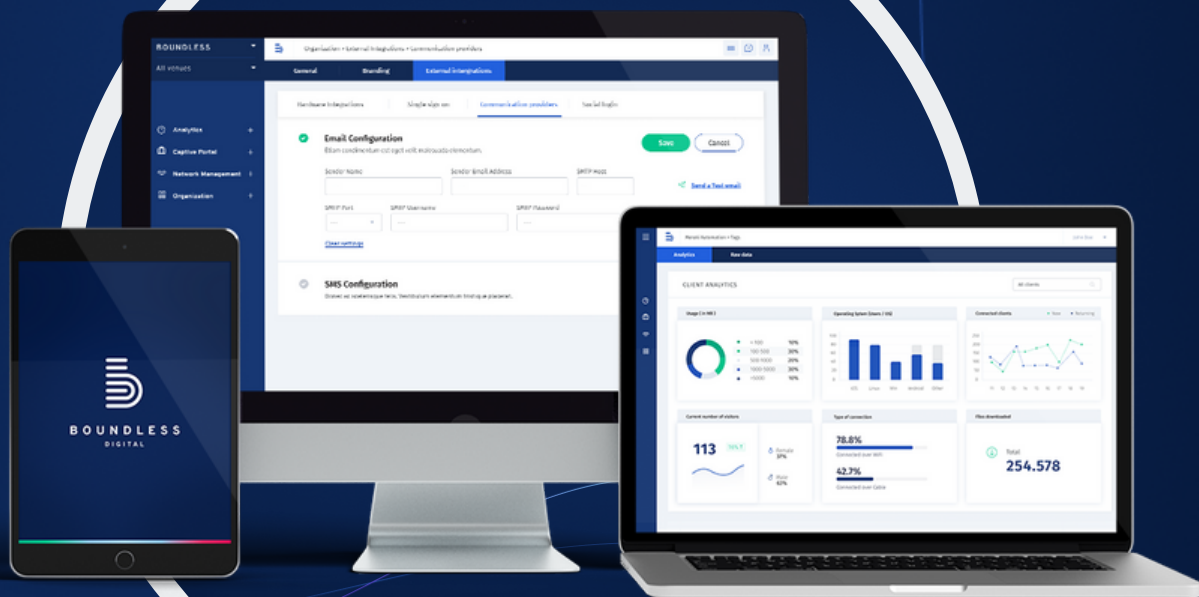

BOUNDLESS AUTOMATION

Get more done, in less time, with no need to code.

The Boundless Automation off-the-shelf platform automates, simplifies, and streamlines your day-to-day IT operations, so that you and your team can be more efficient, more agile, and deliver more value.

By enabling IT networks to be configured via a software, Boundless Automation improves network manageability, eliminates human errors, and reduces downtime.

Seamlessly integrates with your Meraki infrastructures.

The new No-Code platform fully integrates with Cisco Meraki networks. Through the use of the Meraki Dashboard API, Boundless Automation automates the configuration, provisioning, and management of your Meraki network infrastructure.

# BOUNDLESS NO-CODE
AUTOMATION PLATFORM

POWERED BY CISCO Meraki

BOUNDLESS AUTOMATION
SET OF FEATURES

NETWORK MANAGEMENT

Batch Network Creation

Provision thousands of networks instantaneously, with no human error.

- Create networks in bulk and within minutes by uploading a CSV file
- Use our advanced network builder and configure your networks in just a few clicks
- Eliminate human error by deploying your network automatically, using the Meraki Dashboard API

FlexTemplates

Overcome Meraki templates' limitations thanks to our integration with the Meraki Dashboard API.

- List and create customized templates
- Easily apply alert, firewall, and other configuration changes across multiple sites and networks
- Compare configuration settings across sites, adjust and deploy changes at a wide scale
- Deploy new, updated, or cloned configurations simultaneously at a large scale
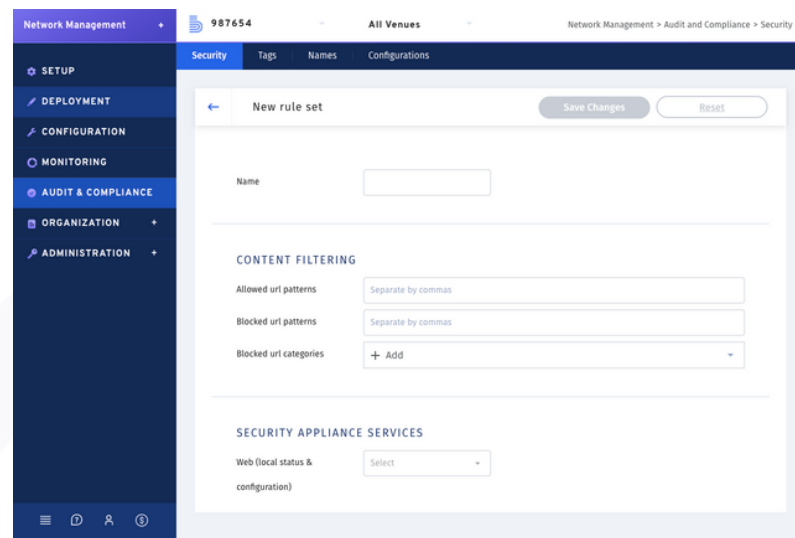

BOUNDLESS AUTOMATION
SET OF FEATURES

NETWORK MANAGEMENT

Audit and Compliance
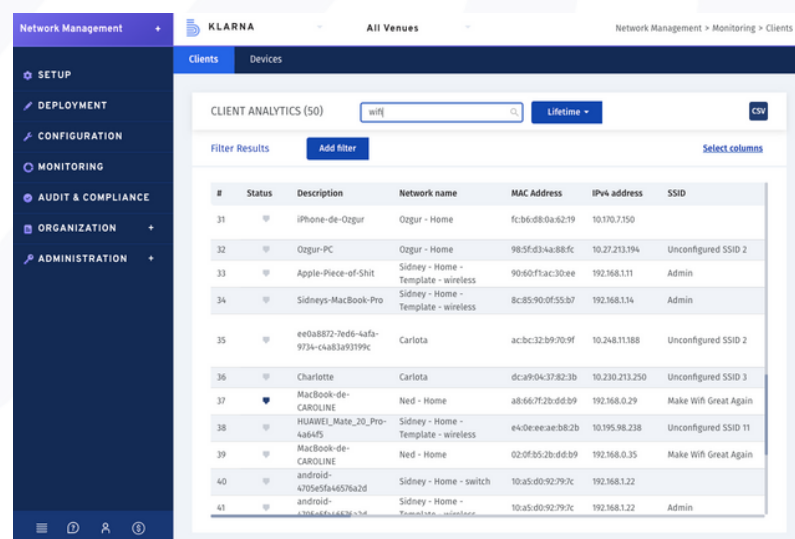

Quickly audit large groups of network devices.

- Configure and manage tags and names across multiple networks simultaneously
- Easily compare and adjust configuration setting across sites
- Get alerted when non-compliant changes take place

Monitoring

Get more visibility to monitor your client devices and troubleshoot faster.

- Aggregate all client devices connected to multiple Meraki networks on a single screen
- List used ports, and check individual status and log history
- Get advanced search functionalities and filtering by MAC or IP address, SSID, etc.

LEARN MORE ABOUT US
BOUNDLESS DIGITAL

Leading the IT transformation through simplification.

Organizations across all industries are experiencing big changes, and shifting the way they operate towards higher cost-efficiency.

IT teams are in the spotlight of these changes, and required to outperform in order to generate more value for their companies.

At Boundless, **we have made our mission to support IT teams successfully achieve today and tomorrow's challenges.** And we are doing so by creating advanced automation solutions that simplify IT management.

The Boundless suite brings more agility, efficiency, and value to IT administration and management, so that IT teams can do more, in less time.
